

FOUNDATION MODULE IN KIDNEY CARE

ANN-UK is delighted that OCB Media, a digital media company, has kindly offered to provide free access to this module for a limited number of student nurses who are on an extended placement.

More information about the module is here

<https://kidneycarelearning.ocbmedia.com/foundation-module-in-kidney-care/>

The module provides you with everything you need to prepare you for your first months on a renal ward, dialysis unit or clinic. It is also useful for allied health professionals who are just starting their career in kidney care. Module topics include signs and symptoms of renal conditions, fluid and electrolyte balance, nutrition, medicine management and an overview of renal replacement therapy. In addition, specialist clinical skills such as assessment and education of people with kidney disease are presented and discussed. The module is interspersed with interactive activities that you can discuss with your senior colleagues and/or mentors. The module will take approximately 10 hours to complete, but you have the flexibility to undertake the module when you wish, in either short or long chunks of time.

If interested, please let Nicki Thomas know and she will organise the free access for you.
